

Licence fees

Radio Spectrum Management collects fees on licences and engineering services to recover the cost of providing these services. The objective is to:

1. Continually seek to improve efficiency in the administration of the Act
2. Fully recover the costs associated with administering the Act
3. Fairly allocate the costs in relation to work undertaken
4. Minimise cross-subsidies within and between licence categories
5. Manage the memorandum account towards a zero balance.

The licence administration fee is charged annually for current licences. The engineering fee is charged for RSM engineering services for both new licences and re-engineering of existing licences.

Payment of fees can be made online or manually.

- For more information see [How do I pay licence fees.](#)
