

## Technical coordination between managers

[The review of Radio Spectrum Policy in New Zealand](#) (completed in 2005) indicated that an opportunity existed for the Ministry to take a more pro-active role in coordination issues. A workshop on coordination was held last year to provide managers an opportunity to engage with the Ministry and to work together to manage interference and maximise business opportunities.

From the workshop, there appear to be three primary challenges to coordination: strategic interest, engineering issues and knowledge issues. These coordination issues may be resolved by regulatory prescription or through voluntary mechanisms.

[A technical discussion document](#) was released on 25 May 2006 and provides further consideration of the issues identified and presents a number of proposals that may be used to improve technical coordination. Submissions on these proposals close 9 June 2006.

### [Technical Discussion Paper](#)

This discussion document provides further consideration of the issues identified and presents a number of proposals that may be used to improve technical coordination.
