Adding new usages to General User Radio Licence: Short Range Devices in frequencies below 30 MHz – Technical consultation

Dear Sir/Madam,

We, China Telecommunication Technology Labs (CTTL), thank RSM for allowing us to comment on this document. CTTL is a major ICT standardization research institute and third party test house in China. We focus on global regulatory/industry/carrier testing business and of course New Zealand is one of our most important markets.

Regarding to the modification to GURL, after studied the proposal, we generally support the document with no technical comments. We are also glad to see most of requirements are aligned with international standards e.g. ETSI standards. This will reduce the difficulty of testing and certification.

Regards,
