Kia Ora,

The number one rule for this should be consent, opt in.

I have EMF sensitivity, i have had my smart meter uninstalled and my home is technology free. I don't want to be subject to datamining or mm waves at a high frequency without my consent. I do not consent.

Number 2, keep the internet wired. Allowing foreign bodies with a hidden agenda to dictate our frequencies rules due to some treaty signed years ago is insane.

There is a frequency weapon that can be used in those ranges, how can you ensure our safety that a hacker won't come along and take over the system?

Number 3, be transparent. we pay your wages.

Number 4, maybe we should be sovereign, self govern.

Withdrawal or denunciation provision in the treaty 28. Under Article 57 of the ITU Constitution, New Zealand may denounce the ITU Constitution and the ITU Convention by notification to the Secretary-General of the ITU. Such a denunciation must simultaneously denounce both treaties and the IRR. Denunciation would take effect one year after the Secretary-General had received the notification. There is no provision for a separate denunciation of the IRR separately.

Subject: propsed rules for iot testbed

The participants in the experiment are notified and consent.
You can ensure use there is no way the frequency can be manipulated or increased.
Inform participants who is collecting the data and what it is used for.
